PROJECT DESCRIPTION

Adjacent to San Jose's historic Municipal Rose Garden, the impressive Rose Garden Library replaced, on the same site, the original library that had served the area since 1960.

The design of the new building features many energy saving elements that function ever so subtly among the warm and inviting environment.

One of the notable energy efficient design features incorporated into the library is the Therma-Fuser™ VAV System that offers individual temperature control while optimizing indoor air quality and saving energy.
